SUMMARY

Backend engineer with 6 years building payment and ledger systems in Go, Python and PostgreSQL. Owned services processing $1.2B/year in card and ACH volume; strong in distributed systems, data modeling, reliability and on-call. Looking for senior backend / platform roles, remote or Austin.

EXPERIENCE

Senior Backend Engineer — Ledgerline (Series B fintech), Austin, TX Mar 2022 – Jul 2026

- Led design of a double-entry ledger service in Go on PostgreSQL handling 4M transactions/day; cut reconciliation breaks 92%.
- Built idempotent payment-orchestration APIs (gRPC/REST) across Stripe, Adyen and an ACH processor; p99 latency 180ms to 70ms.
- Migrated batch settlement jobs from cron to Kafka consumers on Kubernetes (EKS); removed a 6-hour daily settlement lag.
- Owned on-call for payments (1-in-5 rotation); wrote runbooks and SLOs that took monthly Sev-2 incidents from 7 to 1.
- Mentored 3 engineers; ran the backend interview loop (40+ interviews).

Backend Engineer — Carta-like cap table startup "Equitably", Remote Jun 2020 – Feb 2022

- Wrote Python (FastAPI) services for equity grant workflows; designed Postgres schema with row-level security for 900 customer orgs.
- Introduced Terraform + GitHub Actions CI; deploy time 40 min to 8 min.
- Built an audit-log pipeline (Postgres logical replication to S3 to Athena) used for SOC 2 Type II evidence.

Software Engineer — H-E-B Digital, Austin, TX Jul 2018 – May 2020

- Built Go microservices for curbside order slotting serving 300+ stores; Redis caching cut DB load 60%.
- Added Prometheus/Grafana monitoring and on-call alerting for the order pipeline.

SKILLS

Languages: Go, Python, SQL, TypeScript (working). Data: PostgreSQL, Redis, Kafka, DynamoDB, Snowflake. Infra: AWS (EKS, RDS, SQS, Lambda), Kubernetes, Docker, Terraform, GitHub Actions. Practices: distributed systems, idempotency, event sourcing, observability (Prometheus, Grafana, OpenTelemetry), PCI-DSS, SOC 2.

EDUCATION

B.S. Computer Science — The University of Texas at Austin 2018
